

ABSTRACT

A swing rack having a seat dock with adjustable angle includes a loading frame which has two sides coupling respectively with an anchor dock. The anchor dock has a
5 trough for holding a sliding member which is coupled with the seat dock. The seat dock includes a seat rack, a backrest rack and a bracing bar bridging therebetween. A bracing bracket is provided which has a retaining element. The loading frame has a first anchor member. The stretcher between the legs at
10 two sides has a second anchor member. The bracing bracket may be latched on the first and second anchor member to form a secure anchoring to support users at the sitting and lying angle.
